

Creating a 3D Yearbook is Easy and Fun!

3D Effects are created by making optimal color selections during the design process. The magic isn't in the production process, but in how you layer the colors as you design your pages.

Put on your Chromadepth 3D Glasses
and let's get started.

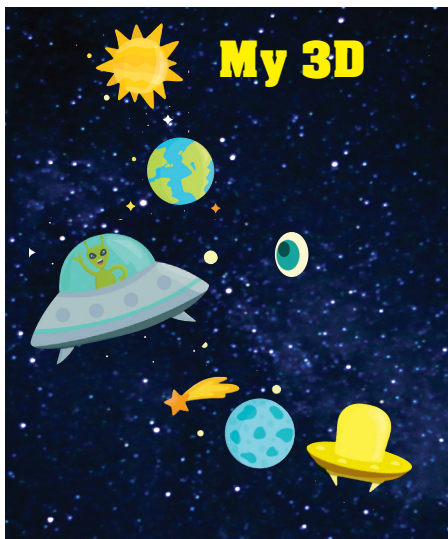

Step 1

Black and Navy Blue are great choices for backgrounds. Every other color layered on the background will appear to float upwards.

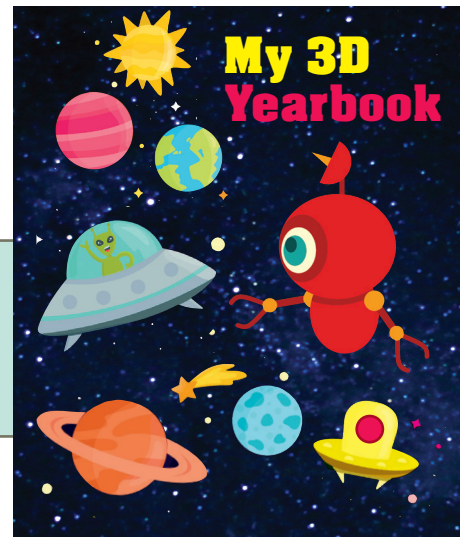

Step 2

Yellows, Bright Blues and Greens make good middle ground objects.

Step 3

Red, Hot Pink and Orange are excellent for foreground colors.

Look What You've Created!

- ▶ Wear your Chromadepth 3D glasses when designing the pages on your computer or device. This is the best way to see how the 3D effects will look when your yearbook is printed. But, don't worry, even without the 3D glasses, your yearbook will look great and colorful!
- ▶ Check out the pre-designed 3D backgrounds we have loaded in your software.
